

So You Bought a
PALM TREE
Now What?

WATERING

Palm trees range from tropical to desert varieties and will require different levels of watering dependent on the palm. As a general rule, you can water 1-2 times in the winter, 2-3 times in the spring and fall, and 3-5 times in the summer.

FERTILIZING

Palm trees benefit greatly from added nutrients in the soil such as manganese, iron, and zinc. Adding these minerals alongside a nitrogen-based fertilizer. Our Moon Valley Nurseries Super Palm Juice is perfect for this purpose.

TRIMMING

Knowing when to trim palm trees is made easy by following a simple rule: When the fronds (palm leaves) fall below a 90-degree angle relative to the trunk, you may trim them off. Don't trim fronds above the 90-degree line as this can cause damage to the crown and new growth of your palm.
